

To Whom It May Concern,

I cannot believe that a problem exists with XM Radio delivering local news and weather! Why is this such an issue when I think that an invaluable service is presented, in light of the fact that there has been such extreme weather in my area, Chicago, this year! Don't you people have something better to do than trying to "Squash Competition and Free Enterprise? What will you try next? Ban Cable and Satellite Television from presenting the Same Type of Content! I thought that we lived in America where innovation and free enterprise were encouraged!
